PROFESSIONAL SUMMARY

MTech in Big Data Analytics and hands-on experience building production-grade ML systems, NLP pipelines, and backend APIs. Published researcher with 3 peer-reviewed papers in IEEE Access, Springer and EAI on deep learning. Experienced across the full ML lifecycle - from feature engineering and model training to REST API deployment and performance optimization. Seeking applied AI and data science roles where research depth meets real-world product impact.

TECHNICAL SKILLS

ML & AI: Scikit-learn, TensorFlow, PyTorch, Keras, spaCy, TF-IDF, NLP, Feature Engineering, Model Deployment, A/B Testing

Generative AI: LLM integration, Llama, ChromaDB, Prompt Engineering, Supervised Fine-Tuning (SFT), RAG pipelines

Data & Analytics: Pandas, NumPy, Statistical Analysis, EDA, Matplotlib, Seaborn, Power BI, MS Excel

Data Engineering: SQL, PostgreSQL, PySpark, Hadoop, AWS S3, Data Pipelines, ETL

MLOps & Backend: Django, FastAPI, REST APIs, Celery, Docker (familiar), CI/CD, Apache JMeter, Git, GitHub

Languages: Python, C/C++

Tools: VS Code, Google Colab, JIRA, Confluence

AI-Assisted Development Tools: Codex, Claude Code, Antigravity, Cursor

EXPERIENCE

Software Developer - Backend · Sumprio Technologies Pvt. Ltd.

May 2025 – March 2026

Hyderabad, India

- Designed and optimized scalable APIs for a Django-based CRM platform, reducing average API response time by **25%** via JMeter-identified bottlenecks - improving system capacity for concurrent users.
- Implemented end-to-end unit test coverage across the application, reducing regression failures and enabling a reliable CI workflow and maintained technical documentation in Confluence and sprint tracking in JIRA.
- Conducted load and stress testing using Apache JMeter, modelling peak-traffic scenarios to validate scalability before production releases.

Data Science and ML Intern · Zaalima Development

Apr 2025 – Jul 2025

Remote

- Built an **AI-powered resume screening system** using spaCy, TF-IDF, and BERT embeddings that automated job-description matching, achieving **92% accuracy** - reducing manual screening effort significantly.
- Developed and evaluated a transaction classification model using Random Forest and XGBoost for fraud pattern detection, achieving **95% accuracy** on the provided dataset.

AI Code Reviewer and SFT Contributor · Outlier (Freelance)

Feb 2025 – Apr 2025

Remote

- Reviewed 30+ AI-generated code samples for correctness, edge-case handling, and best practices; authored 50+ high-quality Python solutions used as ground-truth data for **Supervised Fine-Tuning (SFT)** of production LLMs.
- Applied prompt engineering principles to design evaluation rubrics that improved model response quality and adherence to coding standards.

Data Science Research Intern · California Institute of Genetics

Nov 2024 – Jan 2025

Remote

- Collaborated with a multidisciplinary research team to develop a **hybrid ML model for early Parkinson's disease diagnosis** through biomarker identification from clinical datasets.
- Achieved **92.4% accuracy** in the pre-R&D phase and contributed to experimental design, feature selection, and model evaluation pipeline.

RESEARCH PUBLICATIONS

Peer-reviewed work spanning deep learning, continual learning, and quantum-inspired AI for clinical and financial applications.

Robust Seizure Prediction Model Using EEG Signal for Temporal Lobe Epilepsy Leveraging Deep Learning and Continual Learning

IEEE Access · Vol. 13 · Aug 2025 [\[DOI 7\]](#)

Decoding Market Dynamics: Variational Quantum Circuit in Stock Prediction

Advances in Quantum Inspired AI · Springer · Vol. 274 · Jun 2025 [\[DOI 7\]](#)

A Deep Learning Framework for Prediction of Cardiopulmonary Arrest

EAI Transactions on Pervasive Health and Technology · Vol. 10 · Mar 2024 [\[DOI 7\]](#)

PROJECTS

AlvarQ - Tax Management CRM application

May 2025 – Mar 2026

Python · PostgreSQL · Django · AWS · Git · Docker

Designed, maintained and optimised API for the features of Django based CRM application. Performed load and stress testing with Apache JMeter, simulating peak-traffic conditions to ensure scalability.

Memoraq AI - AI Memo Generator for Decision Making

June – June 2026

Python · LLM · Streamlit · Prompt Engineering

Streamlit app that transforms unclear decisions into structured memos by capturing context, assessing input quality, generating balanced recommendations via Gemini API, and exporting polished PDFs.

Smart Outreach Tool - AI-Powered Cold Email Generator

Oct – Nov 2024

Python · ChromaDB · Streamlit · Llama · Pandas · Scikit-learn

Built an LLM-powered outreach platform with A/B testing to generate personalised cold emails from job descriptions and candidate profiles, demonstrating end-to-end RAG pipeline implementation.

Seismic Data Image Processing

July – Aug 2018

MATLAB

Processed seismic data to enhance images and pinpoint seismic wave emergence using Balanced Contrast Enhancement Technique (BCET).

EDUCATION

M.Tech - Computer Science with Specialization in Big Data Analytics

2022 – 2024

Vellore Institute of Technology, Chennai **CGPA: 9.42 · 2nd Rank**

- ▶ GATE qualified · AICTE-PG scholarship recipient · Relevant coursework: Deep Learning, Big Data Analytics, Statistical Machine Learning

B.E - Electronics & Telecommunication

2015 – 2019

Army Institute of Technology, Pune **CGPA: 8.96**

- ▶ Central Sector Scholarship (MHRD, Govt. of India) · 2015–2019

CERTIFICATIONS

- ▶ AI Professional - Google
- ▶ Generative AI Fundamentals - Databricks
- ▶ Career Essentials in GenAI - Microsoft and LinkedIn
- ▶ Python in Data Science - IBM
- ▶ Data Analytics Essentials - CISCO Networking Academy
- ▶ Data Analytics and Data Science Work Simulation - Accenture, Quantum, BCG, British Airways
